#### NORWEST PIVOT TRACK FILLER

This manual contains valuable information about your new *Norwest Pivot Track Filler*. It has been carefully prepared to give you helpful suggestions for operating, adjusting, and servicing of your equipment. If assistance is needed to understand the information within this manual, please contact Norwest Manufacturing.

Keep this information in a convenient place for quick and easy reference. You have purchased dependable and sturdy equipment, but only with proper care, operation and maintenance can you expect to receive the service and long life designed and built into it. Give this equipment proper attention during slack periods and it will always be ready when you need it.

Norwest Manufacturing proudly displays the FEMA seal of quality on this and other equipment manufactured by our company. All our equipment must meet the following standards.

- 1. The company will provide replacement parts promptly and at a fair price for a maximum of ten years on all machines from the date of manufacture to which the seal will be affixed so long as the company produces that particular piece.
- 2. The majority of Norwest's farm equipment distribution is through servicing bona fide retailers and/or wholesalers with a majority of their sales related to agriculture.
- 3. The Company will reproduce the FEMA seal on a majority of its farm and trade press advertisements and is entitled to reproduce said seal on its company letter head, sales literature, operators manuals, and parts books.
- 4. The company will apply the FEMA seal only to new machines either accompanied by repair parts lists or by notification that a parts list is available.
- 5. The seal will be attached only to new machines that carry a written warranty.
- 6. Norwest Manufacturing will discontinue use of the seal, in any form, upon notification by the Farm Equipment Manufacturers Association that it has violated any terms of this agreement.

#### LIMITED WARRANTY

Norwest Manufacturing warrants, to the original retail customer, the new Norwest equipment identified in this owners manual to be free of defects in material and workmanship. Any part of said equipment that in Norwest's judgment shows evidence of such defects will be repaired without charge, provided that the failure of part(s) shall have occurred within twelve (12) months from the date of delivery of said equipment to the retail customer. Tires, batteries, engines, electrical and hydraulic components and other trade accessories may be warranted by their respective manufacturers and those warranties, if any, are hereby extended to the retail customer. Expendable components such as blades, teeth, chain, sprockets, springs, sweeps and the like are excluded from this warranty.

The retail customer must pay the transportation cost to and from the Norwest dealer's service shop for warranty service. Warranty service will be performed by the Norwest dealer from whom the equipment was purchased, in his service shop and during his regularly scheduled days and hours of operation.

All Norwest obligations under this warranty shall be terminated if the equipment is modified or altered in any way not approved in writing by Norwest, if repair parts other than genuine Norwest repair parts have been used, or if the equipment has been subjected to misuse, neglect, accident, improper maintenance or improper protection in storage.

Norwest reserves the right to make improvements in design or changes in specifications at any time without incurring any obligation to owners of equipment previously sold.

No agent or person has the authority to alter, add to or waive the above warranties which are agreed to be the only warranties, representations or promises, expressed or implied, as to the quality or performance of the products covered and which do not include any implied warranty of merchantability or fitness. In no event will Norwest be liable for incidental or consequential damages or injuries, including, but not limited to, loss of crops, loss of profits, rental of substitute equipment or other commercial loss.

#### **SAFETY**

Most accidents, whether they occur in industry, on the farm, at home, or on the highway, are caused by failure of some individual to follow simple and fundamental safety rules or precautions.

Study and heed the following safety rules and precautions when operating your tractor.

Personal injury may result if these precautions are ignored.

# CAUTION! WHEN OPERATING YOUR TRACTOR

- Securely fasten your seat belt if the tractor has a ROPS.
- Where possible, avoid operating the tractor near ditches, embankments and holes.
- Reduce speed when turning, crossing slopes, and on rough, slick, or muddy surfaces.
  - Stay off slopes too steep for safe operation.
- Watch where you are going, especially at edges of worksite, on roads, and around trees.
  - Do not permit others to ride.
  - Operate the tractor smoothly; no jerky turns, starts, or stops.
- Hitch only to the drawbar and hitch points recommended by the tractor manufacturer.
  - When stopped, set brake securely and use park lock if available.

## **CAUTION!**WHEN OPERATING YOUR TRACTOR

- Stop engine, disengage PTO, and wait for all movements to stop before attempting to unclog, clean, adjust or service this machine unless otherwise recommended in the "Operations Manual".
  - Always lower track filler to the ground when not in use.
- Do not unhitch track filler from tractor until supporting stands are in place and secured.
  - Keep hands, feet, and clothing away from moving parts.
  - Keep off equipment unless an operator's seat or platform is provided.
    - Keep others off equipment.
  - Make sure everyone is clear of machine before starting tractor engine or operating track filler.
  - Use extreme care when operating close to ditches, fences or on hillsides.
- Before moving track filler on highway, make sure the triangular SMV (Slow Moving Vehicle) sign is free of dust or dirt, and make sure the propelling vehicles' flashing lights are operating properly. In this regard, check local governmental regulations.
- Before transporting track filler on highway, all transport pins must be in place, to prevent accidental lowering of the track filler and components.
- When assembling track filler, be sure that supporting and lifting devices are stable and have sufficient capacity to withstand the weight of the track filler during assembly.
- Never attach cables, chains, or ropes to track filler for the purpose of lifting, towing, or pulling. Personal injury or damage of equipment may result.
  - Never stand or work under the track filler without taking precautions to prevent accidental lowering.
- Be alert to electrical wires and other overhead obstacles when transporting the track filler.
  - Be careful when working around the coulter blades. The edge of the coulter is sharp enough to cause injury if accidentally contacted.
    - The maximum towing speed for the Norwest Pivot Track Filler is 20 MPH.
